WP SHORTCODE PRO USER'S GUIDE

WP Pop Up Documentation

WP Shortcode Pro is a wordpress plugin that enables the user to make use of shortcodes to generate various content types to posts and pages. It is a quick and easy tool to use in adding styles to your contents without any need of in-depth programming knowledge or experience.

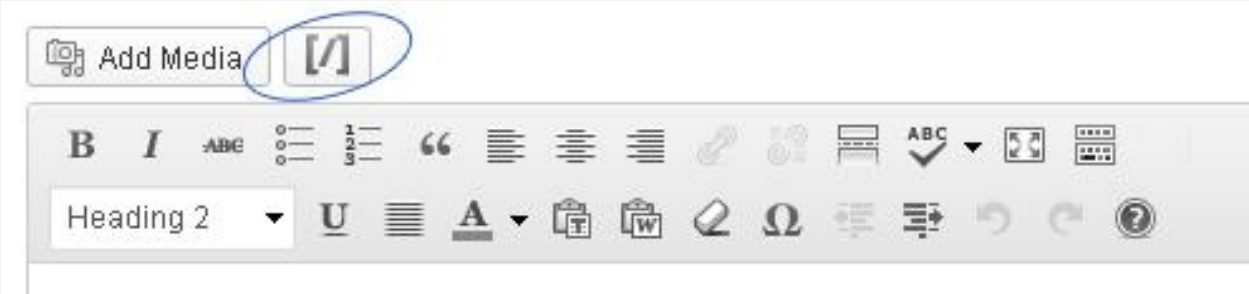
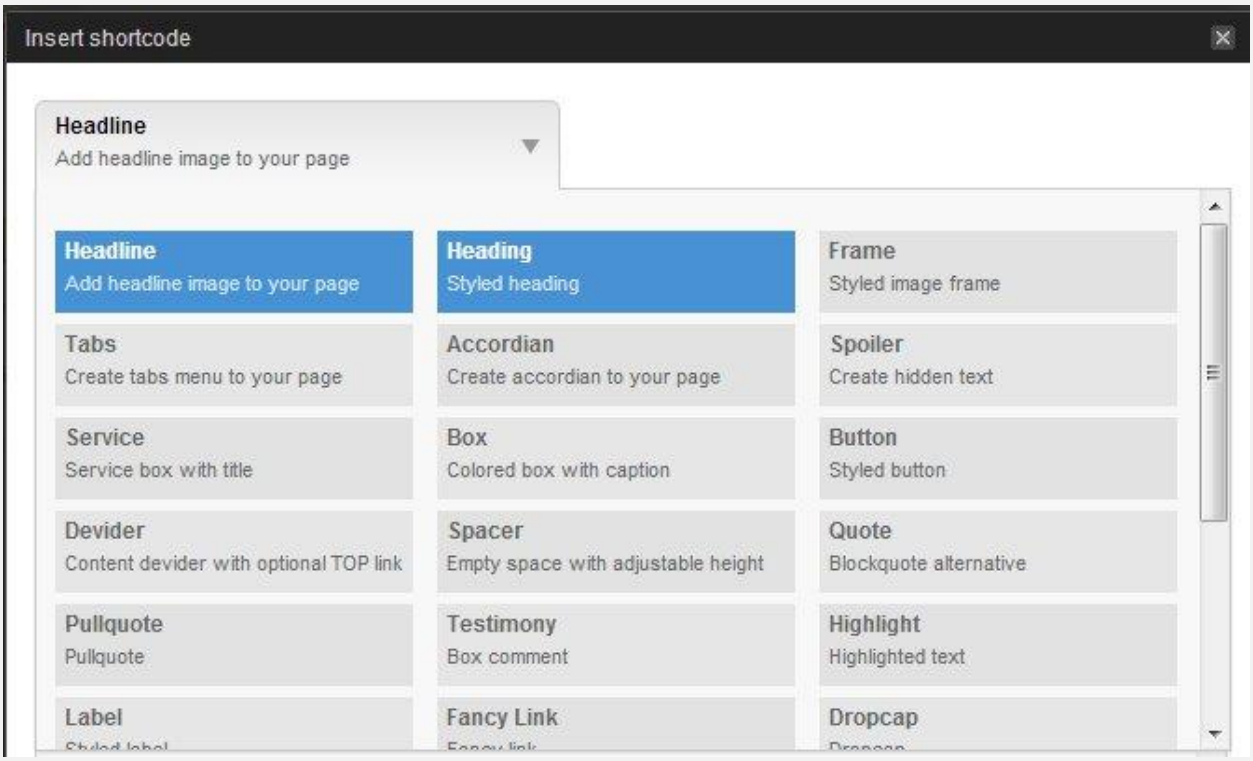
How to Use WP Pop Up

This guide assumes that you already have logged in to your wordpress admin area and that **WP Shortcode Pro** has been successfully installed in your wordpress site.

a. Create or edit an existing page or post. You should see the **WP Shortcode Pro** icon on the right side of the **Add Media** button. See screenshot below for reference.



b. Click the icon in order to display the options to generate shortcodes for specific content types.



c. Select from the list of content types you would like to generate shortcodes. Define settings and click **Insert**.

Content Types Supported

Listed below are content types supported by the plugin to generate shortcode.

I. Headline

This inserts a shortcode to design and use as a headline to your posts or pages. Below are examples of the headline styles:

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Content –** this is the text content of your headline.
b. **Text-color –** the color of the text content which you can configure according to your preference. You can either use the built-in color picker or enter the hexadecimal value of the color.
c. **Font-size –** this would be the size of the text content of your headline.
d. **Background –** this is where you can add style to your headline by choosing from the 6 different styles available.

II. Heading

This will insert styled headings to your posts or pages. Below are examples using this shortcode:

This Is Example For Heading

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Title –** this is the title or the content of the heading to be displayed on the post or page.
b. **Style –** choose from 4 different styles to design your headings
c. **HTML tag –** choose what type of heading it will be (h1, h2, h3, h4, h5 or h6)
d. **Text Align –** the alignment of text contents on your heading.

III. Frame

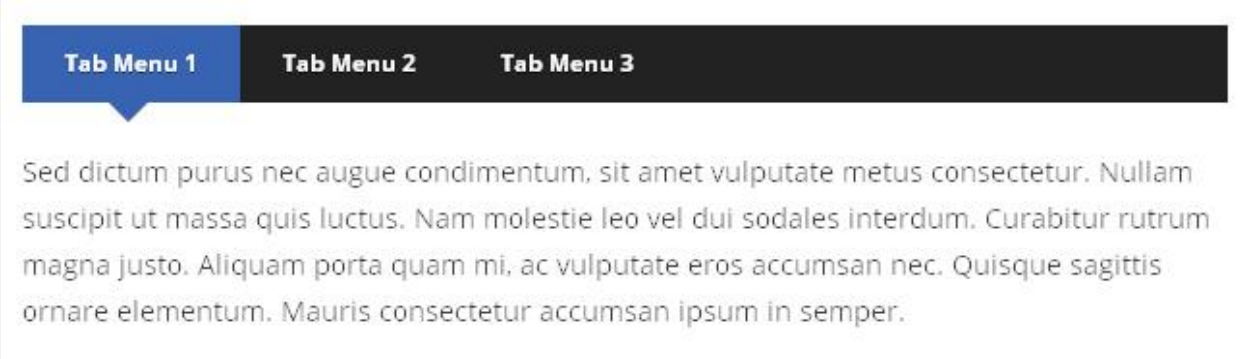
This content type generates a shortcode which renders frame to your page or post image. Below is an example of a framed image:

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Image Tag –** this tag is . Replace yourimage.jpg with the actual image url. The easiest way to do this is upload your image using the **Add Media** button and copy the image url without inserting the image on the page or post editor.
b. **Frame Align –** this determines the image alignment.
c. **Style –** 3 different frame styles you can choose from to apply to your image.

IV. Tabs

This will insert a styled tab to any post or page. Below is an example of an inserted tab shortcode:



Tab Menu 1
Tab Menu 2
Tab Menu 3
Sed dictum purus nec augue condimentum, sit amet vulputate metus consectetur. Nullam suscipit ut massa quis luctus. Nam molestie leo vel dui sodales interdum. Curabitur rutrum magna justo. Aliquam porta quam mi, ac vulputate eros accumsan nec. Quisque sagittis ornare elementum. Mauris consectetur accumsan ipsum in semper.

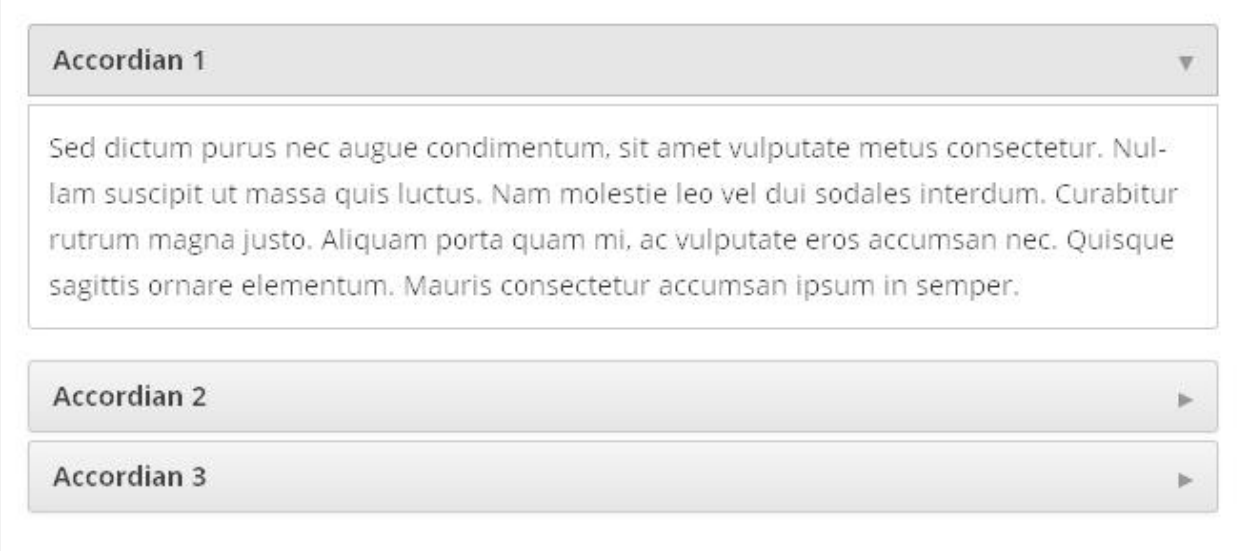
In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Style –** choose from 6 different tab styles according to your preference.
b. **Content -** For the contents of the tabs you must specify within html tag definition list, like the following example (where in between <dt></dt> tags is the title of the tab menu and in between <dd></dd> tags is the content of the tab) :

```
<dl>
   <dt>Tab Menu 1</dt>
   <dd>Tab Content 1</dd>
   <dt>Tab Menu 2</dt>
   <dd>Tab Content 2</dd>
</dl>
```

V. Accordian

This will insert a styled accordion tab menu in your post or page. See example below:



Accordian 1
Sed dictum purus nec augue condimentum, sit amet vulputate metus consectetur. Nullam suscipit ut massa quis luctus. Nam molestie leo vel dui sodales interdum. Curabitur rutrum magna justo. Aliquam porta quam mi, ac vulputate eros accumsan nec. Quisque sagittis ornare elementum. Mauris consectetur accumsan ipsum in semper.
Accordian 2
Accordian 3

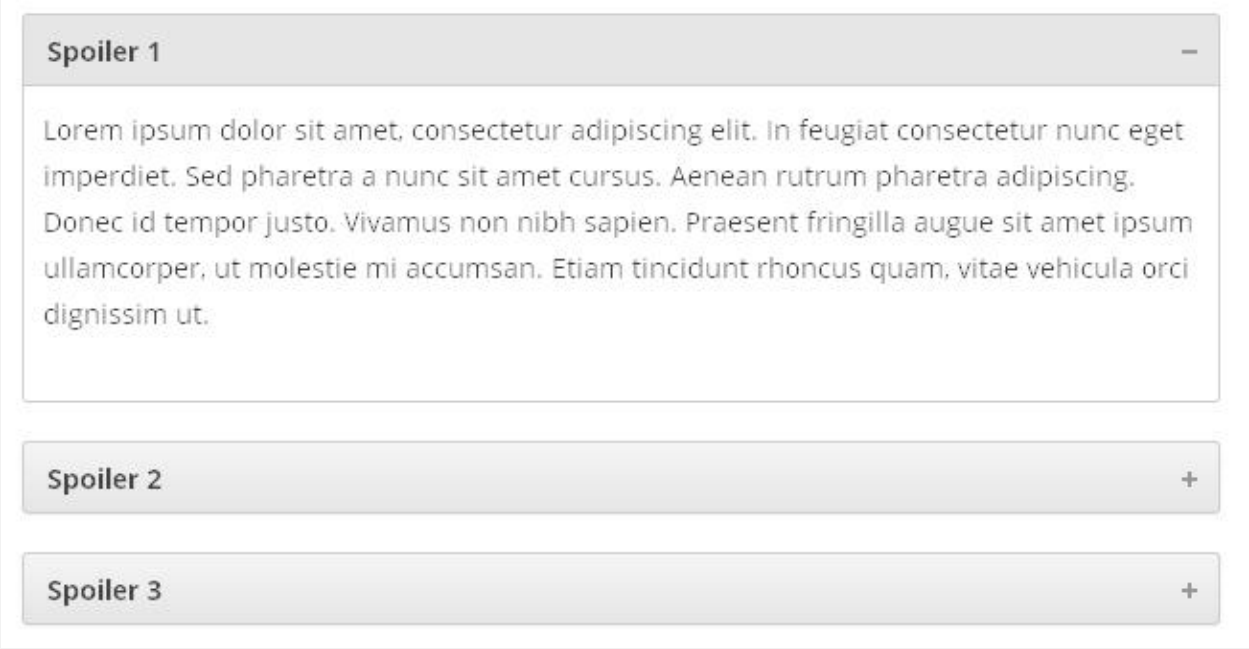
In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Style –** choose from 3 different accordion styles according to your preference.
b. **Content -** For the contents of the accordion, you must specify within html tag definition list, like the following example (where in between <dt></dt> tags is the title of the accordian menu and in between <dd></dd> tags is the content of the accordian) :

```
<dl>
   <dt>Accordian Menu 1</dt>
   <dd>Accordian Content 1</dd>
   <dt>Accordian Menu 2</dt>
   <dd>Accordian Content 2</dd>
</dl>
```

VI. Spoiler

This will insert a dynamic spoiler section on your post or page which you can set to be open or close. See examples below (the first one is show to be open) :



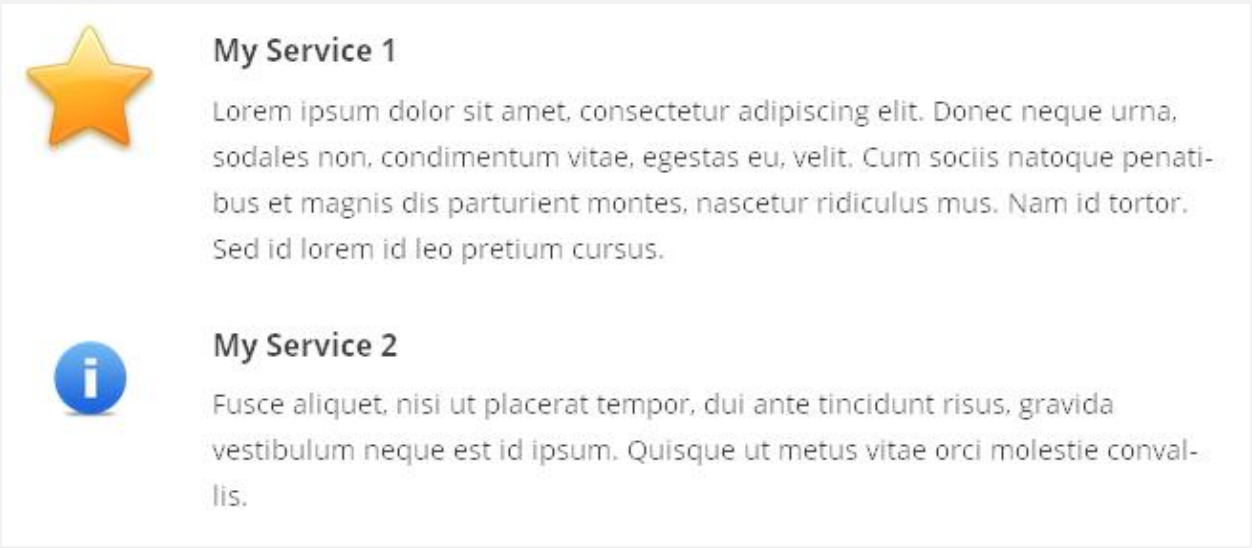
Spoiler 1
Lorem ipsum dolor sit amet, consectetur adipiscing elit. In feugiat consectetur nunc eget imperdiet. Sed pharetra a nunc sit amet cursus. Aenean rutrum pharetra adipiscing. Donec id tempor justo. Vivamus non nibh sapien. Praesent fringilla augue sit amet ipsum ullamcorper, ut molestie mi accumsan. Etiam tincidunt rhoncus quam, vitae vehicula orci dignissim ut.
Spoiler 2
Spoiler 3

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Title –** the title/heading of your spoiler content.
b. **Content –** the content below the title which contains the spoiler.
c. **Is Spoiler Open -** option to determine whether the content of a spoiler is displayed by default.
d. **Style –** choose from 3 different spoiler styles according to your preference.

VII. Service

This will insert a content containing the list of services that you have to offer to your clients or customers. Please see example below:

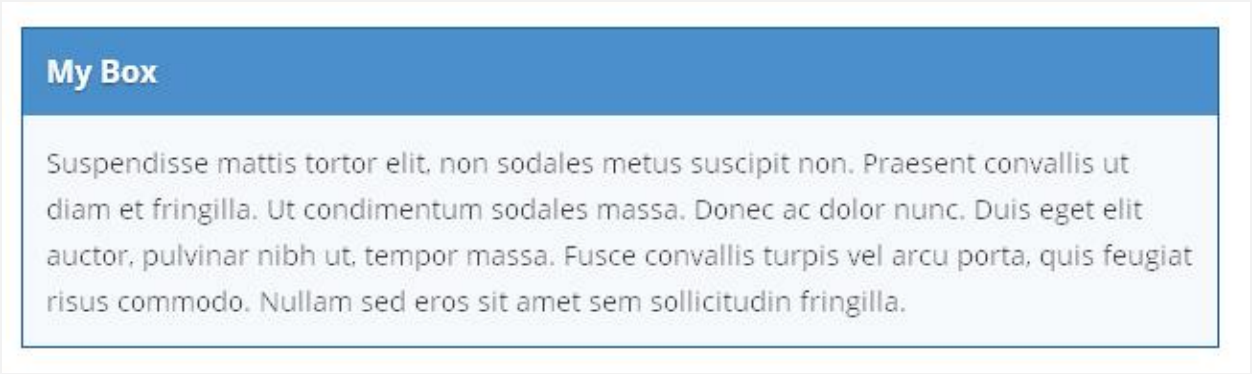


My Service 1
Lorem ipsum dolor sit amet, consectetur adipiscing elit. Donec neque urna, sodales non, condimentum vitae, egestas eu, velit. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Nam id tortor. Sed id lorem id leo pretium cursus.
My Service 2
Fusce aliquet, nisi ut placerat tempor, dui ante tincidunt risus, gravida vestibulum neque est id ipsum. Quisque ut metus vitae orci molestie convallis.

a. **Title –** the title or heading of your service
b. **Icon URL –** the location of your icon that should start with (http://)
c. **Content –** this is the section where you can list down and describe your services

VIII. Box

This inserts a styled box to your post or page. See below sample for this content type:



My Box
Suspendisse mattis tortor elit, non sodales metus suscipit non. Praesent convallis ut diam et fringilla. Ut condimentum sodales massa. Donec ac dolor nunc. Duis eget elit auctor, pulvinar nibh ut, tempor massa. Fusce convallis turpis vel arcu porta, quis feugiat risus commodo. Nullam sed eros sit amet sem sollicitudin fringilla.

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Box Color –** this will be the theme color of the box. You can choose from the built in color picker or you can manually enter the hexadecimal value of the color.
b. **Title –** this will be the title or the heading of the box content

c. **Content –** this field will be where you should be adding in the content inside the box.

IX. Button

This inserts different buttons coming in with different styles to be used on whatever it will serve best in your posts or pages. See example below:

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Button Label –** this is the text value of your button.
b. **Button URL –** this is the url destination of the link when clicked
c. **Style –** choose from the 7 different buttons styles according to your preference.
d. **Button Size –** determines the size of your button. You can either set it to be mini, small, medium, large or very large.
e. **Text Color –** the color of the text content or the label of your button. You can choose the color using the built-in color picker or manually enter the hexadecimal value of your choice.
f. **Corner Radius –** this determines how round will be the corners of your button in pixels.
g. **Button Icon –** this dropdown contains various pre-made button icons ready for use in your button.
h. **Icon Position –** this determines the position of your icon which can either be before the text or after the text.
i. **Link Target –** determines how the link should be opened. Select **self** if you would like it to be opened on the same window or **blank** if you want it to be opened in a new tab or window.

X. Devider

This generates a shortcode for a divider that adds a division in between contents in posts or pages. See example below:

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Show Top Link –** choose whether to show or hide the top link which when clicked takes the user to the top of the page.
b. **Style –** choose from the 4 devider styles available according to your preference.

XI. Spacer

This creates an empty space with adjustable height. There is only one setting to configure for this content type which is spacer height in pixels. The value should be an integer.

XII. Quote

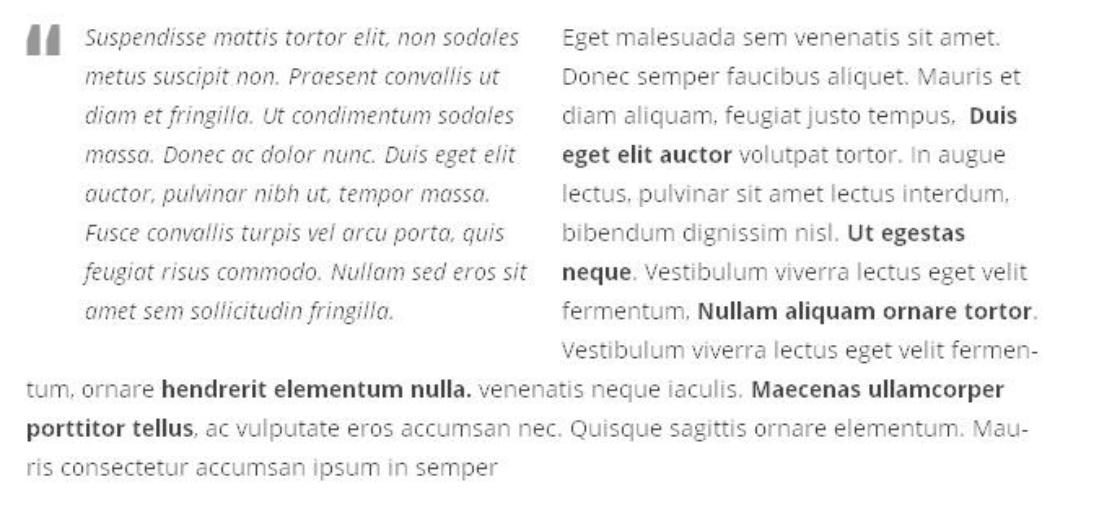
This creates a quote which is an alternative to the blockquote built-in feature of the wordpress editor. See example below:

> *Suspendisse mattis tortor elit, non sodales metus suscipit non. Praesent convallis ut diam et fringilla. Ut condimentum sodales massa. Donec ac dolor nunc. Duis eget elit auctor, pulvinar nibh ut, tempor massa. Fusce convallis turpis vel arcu porta, quis feugiat risus commodo. Nullam sed eros sit amet sem sollicitudin fringilla.*

In order to generate the shortcode for this content type, you need to supply the **Content** which is the text content of your quote.

XIII. Pullquote

This works if you would like to insert citations which can be positioned according to your preferences. Below is an example of a pullquote.



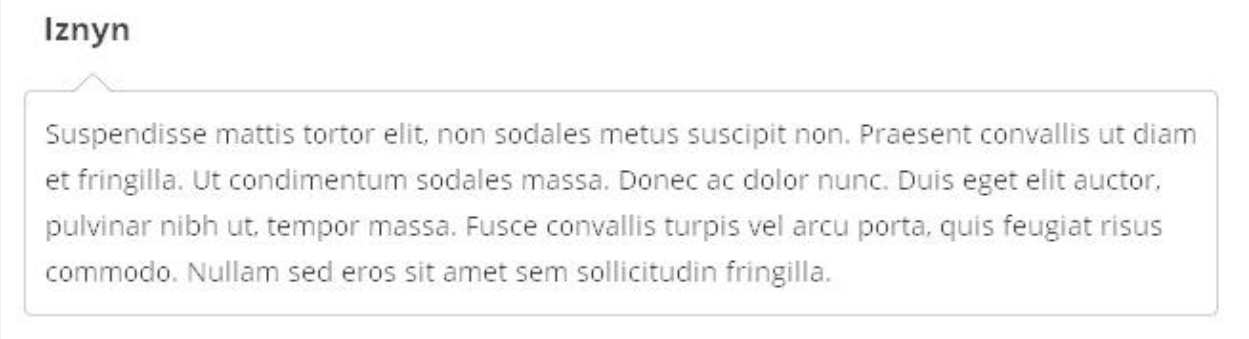
Suspendisse mattis tortor elit, non sodales metus suscipit non. Praesent convallis ut diam et fringilla. Ut condimentum sodales massa. Donec ac dolor nunc. Duis eget elit auctor, pulvinar nibh ut, tempor massa. Fusce convallis turpis vel arcu porta, quis feugiat risus commodo. Nullam sed eros sit amet sem sollicitudin fringilla.
Eget malesuada sem venenatis sit amet. Donec semper faucibus aliquet. Mauris et diam aliquam, feugiat justo tempus, Duis eget elit auctor volutpat tortor. In augue lectus, pulvinar sit amet lectus interdum, bibendum dignissim nisl. Ut egestas neque. Vestibulum viverra lectus eget velit fermentum. Nullam aliquam ornare tortor. Vestibulum viverra lectus eget velit fermentum, ornare hendrerit elementum nulla. venenatis neque iaculis. Maecenas ullamcorper porttitor tellus, ac vulputate eros accumsan nec. Quisque sagittis ornare elementum. Mauris consectetur accumsan ipsum in semper

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Content –** this would be the content inside the pullquote.
b. **Pullquote Alignment –** setting which would allow you to decide how you would like your pullquote to be positioned.

XIV. Testimony

This creates a shortcode that renders content for a testimonial. See image below:



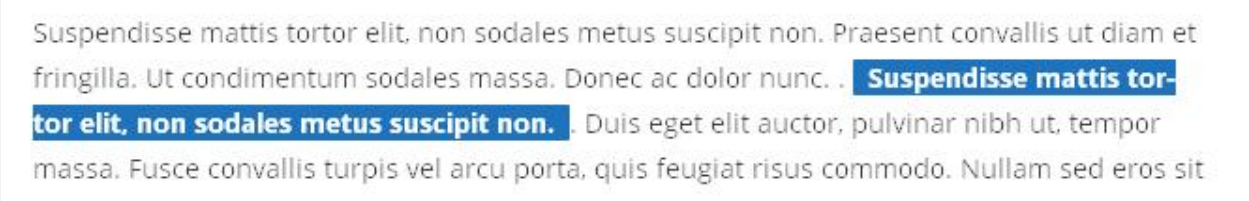
Iznyn
Suspendisse mattis tortor elit, non sodales metus suscipit non. Praesent convallis ut diam et fringilla. Ut condimentum sodales massa. Donec ac dolor nunc. Duis eget elit auctor, pulvinar nibh ut, tempor massa. Fusce convallis turpis vel arcu porta, quis feugiat risus commodo. Nullam sed eros sit amet sem sollicitudin fringilla.

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Author –** this is the name of author or writer of the testimonial.
b. **Content –** this is where the testimonial content should go.
c. **Style –** choose from 4 styles according to your preference to style your testimonials.

XV. Highlight

This generates a shortcode that highlights contents setup. See example below:



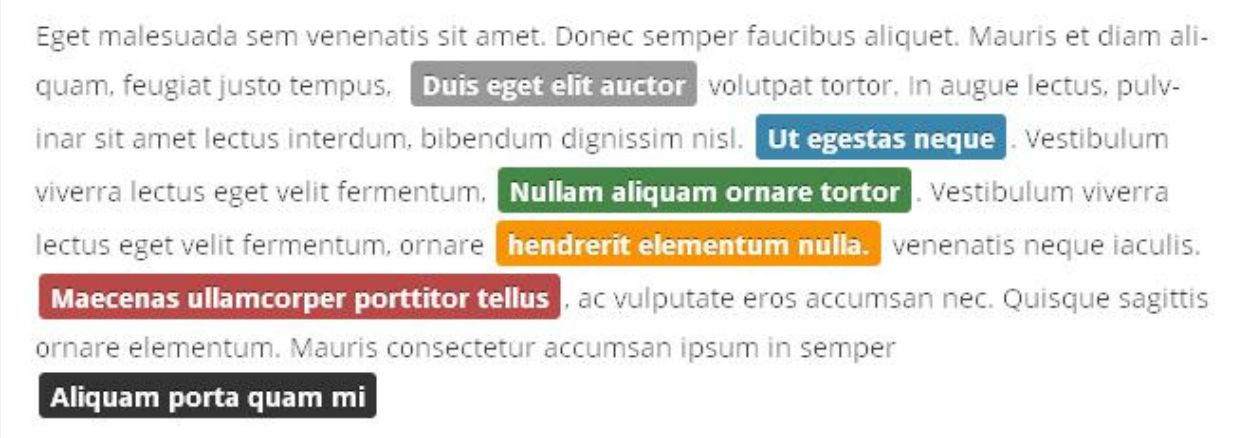
Suspendisse mattis tortor elit, non sodales metus suscipit non. Praesent convallis ut diam et fringilla. Ut condimentum sodales massa. Donec ac dolor nunc. .
Suspendisse mattis tortor elit, non sodales metus suscipit non.
. Duis eget elit auctor, pulvinar nibh ut, tempor massa. Fusce convallis turpis vel arcu porta, quis feugiat risus commodo. Nullam sed eros sit

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Background Color –** this will be the color of the highlight to your text. You can choose the colors using the built-in color picker or you may also manually enter the hexadecimal value of the color.
b. **Text Color –** this is the color of your text. You can choose the colors using the built-in color picker or you may also manually enter the hexadecimal value of the color. Always take note not to use the same color as with your background color else the text would just blend in to the highlight.
c. **Content –** this is where you will enter the text contents to be highlighted.

XVI. Label

This generates a shortcode that creates labels to your posts or pages. Refer to the example below:



Eget malesuada sem venenatis sit amet. Donec semper faucibus aliquet. Mauris et diam aliquam, feugiat justo tempus.
Duis eget elit auctor
volutpat tortor. In augue lectus, pulvinar sit amet lectus interdum, bibendum dignissim nisl.
Ut egestas neque
. Vestibulum viverra lectus eget velit fermentum.
Nullam aliquam ornare tortor
. Vestibulum viverra lectus eget velit fermentum, ornare
hendrerit elementum nulla.
venenatis neque iaculis.
Maecenas ullamcorper porttitor tellus
, ac vulputate eros accumsan nec. Quisque sagittis ornare elementum. Mauris consectetur accumsan ipsum in semper
Aliquam porta quam mi

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Style –** this determines what label style will you be using for your contents. You may choose from **default, info, success, warning, error or inverse.**
b. **Content –** this is where the content to be labeled should be entered.

XVII. Fancy Link

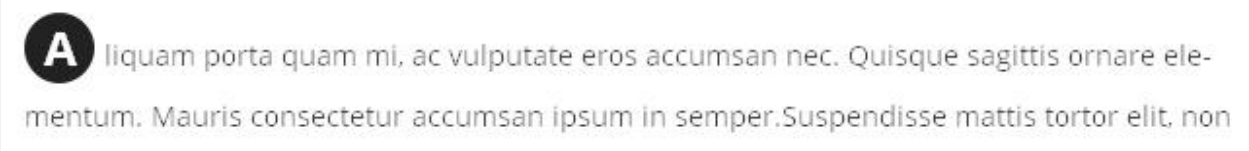
This generates a shortcode that adds style to your link making it fancy. See below picture as an example:

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Link Color –** this is the color of the text link. Select a color using the built-in color picker or manually enter the hexadecimal value of the color of your choice.
b. **Style –** choose from 3 different styles available according to your preference.
c. **URL –** should be filled in with the destination of your link when clicked by the user.
d. **Content –** this is where will the anchor text of your link be added.

XVIII. Dropcap

This generates a shortcode for dropcaps in text contents of your posts and pages. See example below for reference:



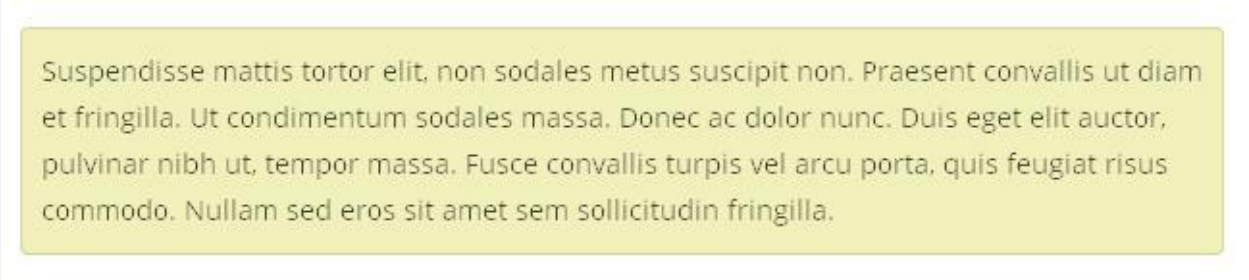
A liquam porta quam mi, ac vulputate eros accumsan nec. Quisque sagittis ornare ele-
mentum. Mauris consectetur accumsan ipsum in semper.Suspendisse mattis tortor elit, non

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Dropcap Size –** choose from the 3 available sizes of the dropcap: **small, medium or large**.
b. **Dropcap Style –** choose from the 3 dropcap styles of your choosing.
c. **Content –** should be the first letter of the product where you would like to apply dropcaps.

XIX. Note

This shorcode generates note styling to contents. Basically, it is applicable to emphasize important reminders or instructions on your posts or pages. See sample below:



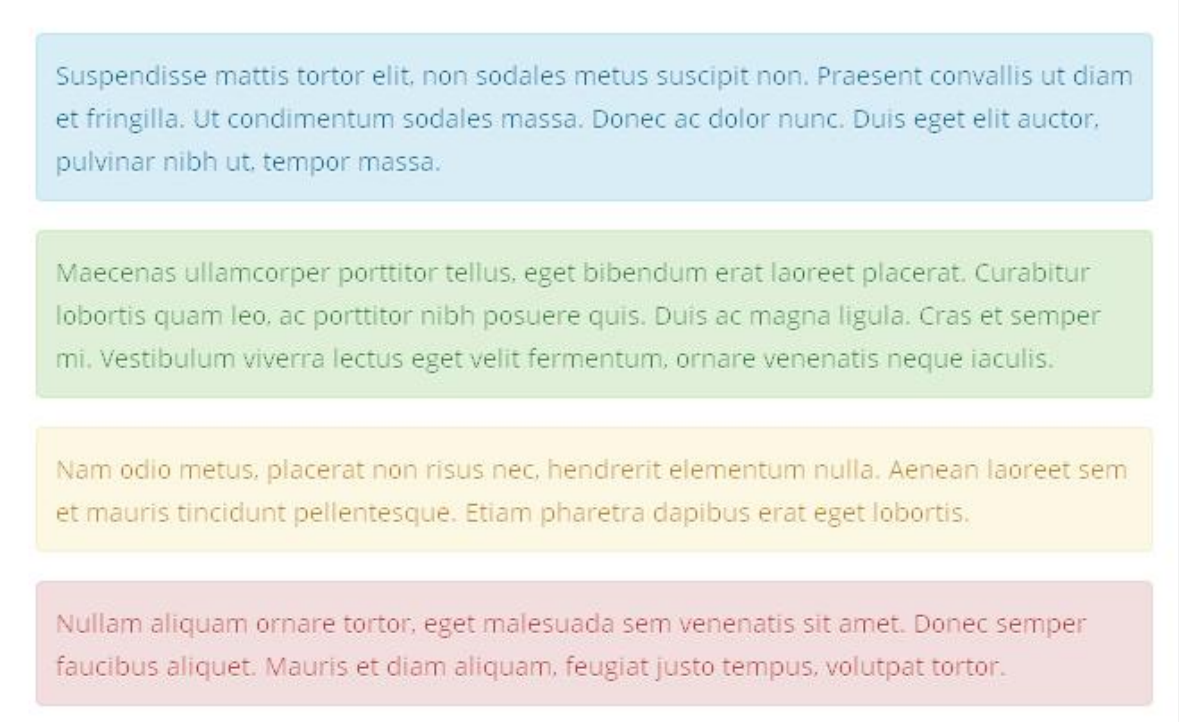
Suspendisse mattis tortor elit, non sodales metus suscipit non. Praesent convallis ut diam et fringilla. Ut condimentum sodales massa. Donec ac dolor nunc. Duis eget elit auctor, pulvinar nibh ut, tempor massa. Fusce convallis turpis vel arcu porta, quis feugiat risus commodo. Nullam sed eros sit amet sem sollicitudin fringilla.

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Color –** select a color from the built-in color picker or manually enter the hexadecimal value of the color of your choice to be used as the background.
b. **Content –** this is where you will be placing the contents as notes.

XX. Message

This shortcode is quite similar to note except that it is intended to show 4 types of messages in your site which is **info, success, warning or error.** See examples below:



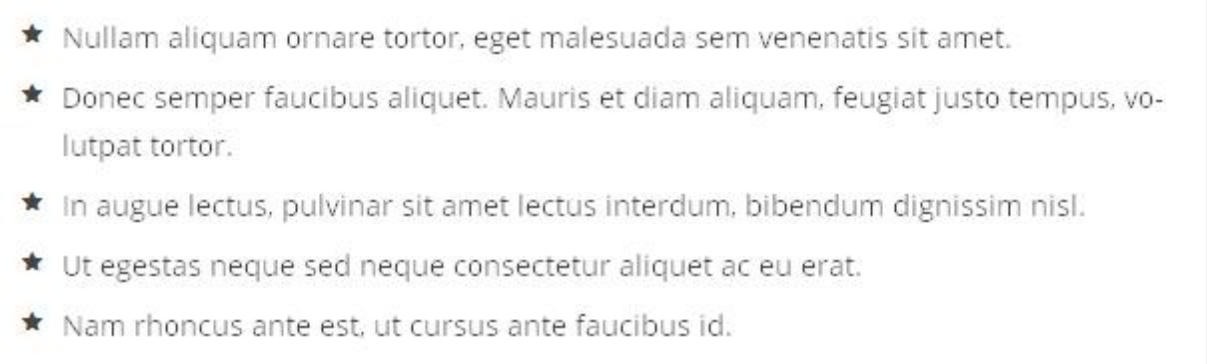
Suspendisse mattis tortor elit, non sodales metus suscipit non. Praesent convallis ut diam et fringilla. Ut condimentum sodales massa. Donec ac dolor nunc. Duis eget elit auctor, pulvinar nibh ut, tempor massa.
Maecenas ullamcorper porttitor tellus, eget bibendum erat laoreet placerat. Curabitur lobortis quam leo, ac porttitor nibh posuere quis. Duis ac magna ligula. Cras et semper mi. Vestibulum viverra lectus eget velit fermentum, ornare venenatis neque iaculis.
Nam odio metus, placerat non risus nec, hendrerit elementum nulla. Aenean laoreet sem et mauris tincidunt pellentesque. Etiam pharetra dapibus erat eget lobortis.
Nullam aliquam ornare tortor, eget malesuada sem venenatis sit amet. Donec semper faucibus aliquet. Mauris et diam aliquam, feugiat justo tempus, volutpat tortor.

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Style –** choose from the list what type of message will the content be displayed on your post or page.
b. **Content –** this is where the contents or the message should be entered.

XXI. List

This generates a shortcode that displays fancy looking lists in your posts or pages. See example below:



Nullam aliquam ornare tortor, eget malesuada sem venenatis sit amet.
Donec semper faucibus aliquet. Mauris et diam aliquam, feugiat justo tempus, volutpat tortor.
In augue lectus, pulvinar sit amet lectus interdum, bibendum dignissim nisl.
Ut egestas neque sed neque consectetur aliquet ac eu erat.
Nam rhoncus ante est, ut cursus ante faucibus id.

Note: This is only applicable to unordered lists.

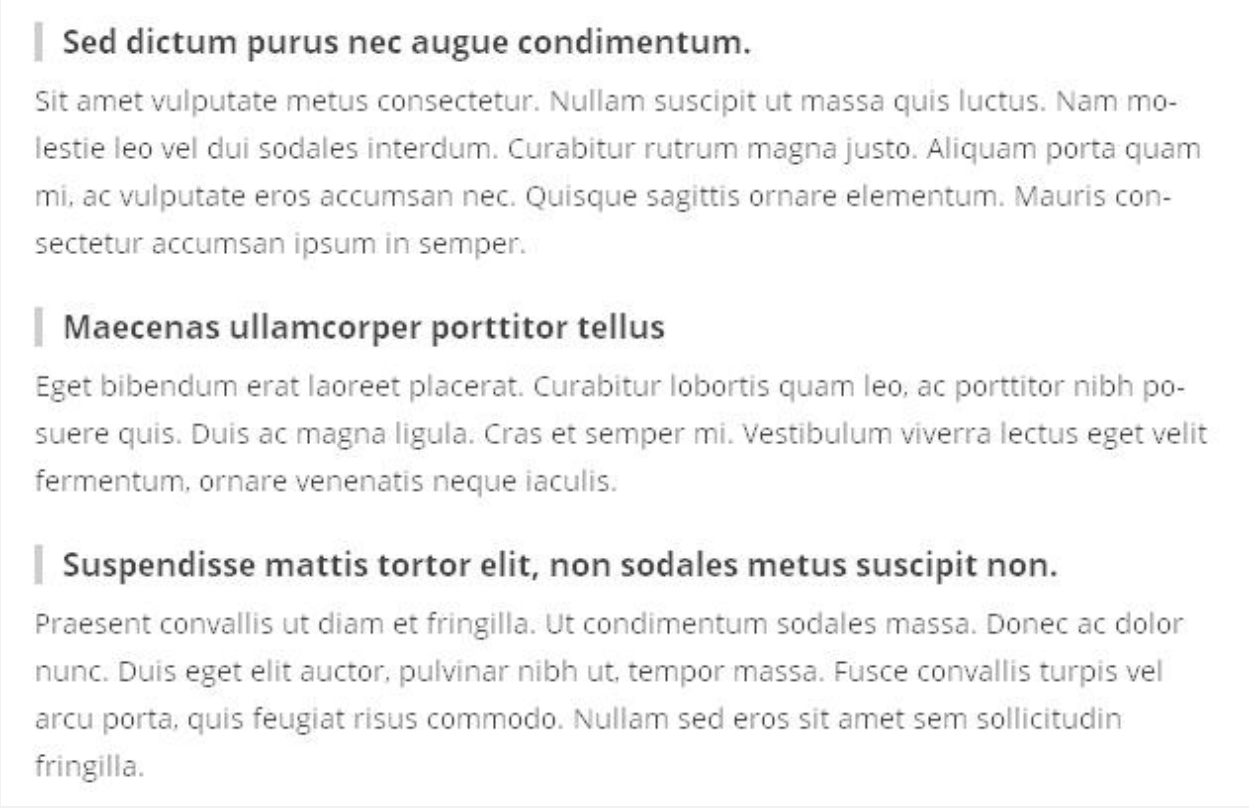
In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Icon –** choose from the different icons in the dropdown the style you prefer using for your list items.
b. **Content -** you must specify within html tag unordered list, as the following example (where in between tags are the list items enclosed between :

```
<ul>
    <li>Item 1</li>
    <li>Item 1</li>
</ul>
```

XXII. Definition List

This shortcode is used to generate a definition list or to define certain terms inside a post or page. See example below:



Sed dictum purus nec augue condimentum.
Sit amet vulputate metus consectetur. Nullam suscipit ut massa quis luctus. Nam molestie leo vel dui sodales interdum. Curabitur rutrum magna justo. Aliquam porta quam mi, ac vulputate eros accumsan nec. Quisque sagittis ornare elementum. Mauris consectetur accumsan ipsum in semper.
Maecenas ullamcorper porttitor tellus
Eget bibendum erat laoreet placerat. Curabitur lobortis quam leo, ac porttitor nibh posuere quis. Duis ac magna ligula. Cras et semper mi. Vestibulum viverra lectus eget velit fermentum, ornare venenatis neque iaculis.
Suspendisse mattis tortor elit, non sodales metus suscipit non.
Praesent convallis ut diam et fringilla. Ut condimentum sodales massa. Donec ac dolor nunc. Duis eget elit auctor, pulvinar nibh ut, tempor massa. Fusce convallis turpis vel arcu porta, quis feugiat risus commodo. Nullam sed eros sit amet sem sollicitudin fringilla.

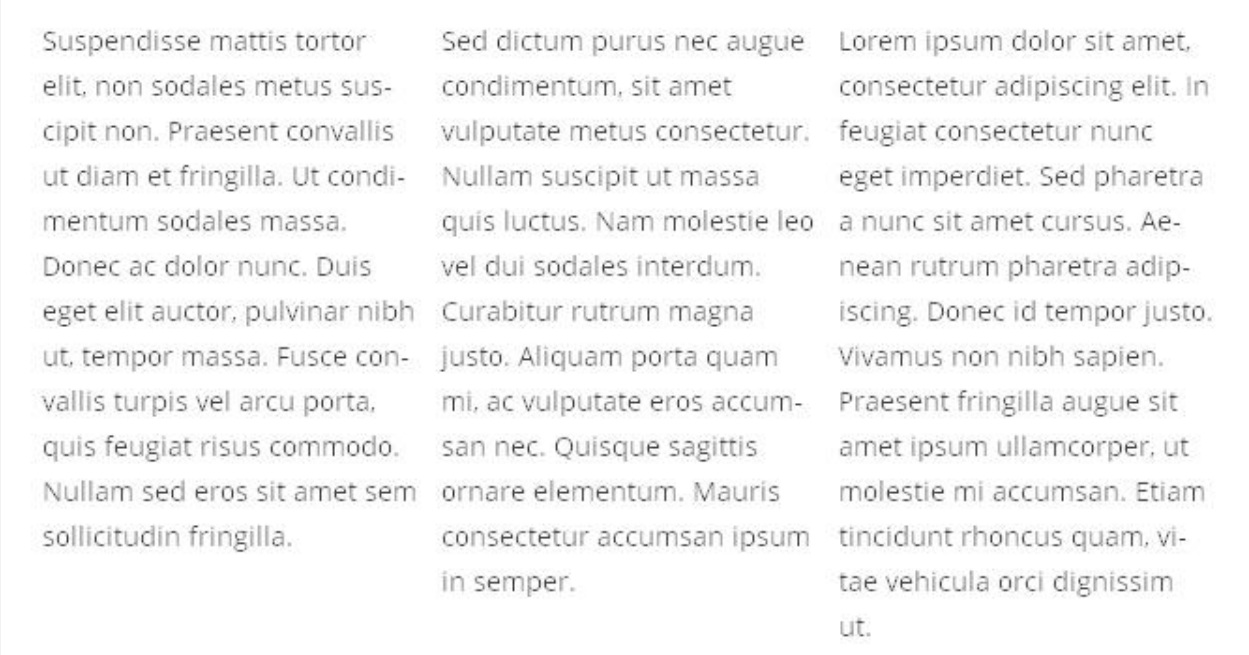
In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Style –** choose from 3 different definition list styles of your preference.
b. **Content –** are the contents to be defined where the definition style will be applied to. The must be within html tag definition list, like the following example (where in between <dt></dt> tags is the title of the definition list and in between <dd></dd> tags is the content of it) :

```
<dl>
   <dt>Definition List 1</dt>
   <dd>Definition List Content 1</dd>
   <dt>Definition List 2</dt>
   <dd>Definition List Content 2</dd>
</dl>
```

XXIII. Column

This generates a shortcode wherein depending on the settings, will the size of the column shall appear on the posts or pages.



Suspendisse mattis tortor elit, non sodales metus suscipit non. Praesent convallis ut diam et fringilla. Ut condimentum sodales massa. Donec ac dolor nunc. Duis eget elit auctor, pulvinar nibh ut, tempor massa. Fusce convallis turpis vel arcu porta, quis feugiat risus commodo. Nullam sed eros sit amet sem sollicitudin fringilla.
Sed dictum purus nec augue condimentum, sit amet vulputate metus consectetur. Nullam suscipit ut massa quis luctus. Nam molestie leo vel dui sodales interdum. Curabitur rutrum magna justo. Aliquam porta quam mi, ac vulputate eros accumsan nec. Quisque sagittis ornare elementum. Mauris consectetur accumsan ipsum in semper.
Lorem ipsum dolor sit amet, consectetur adipiscing elit. In feugiat consectetur nunc eget imperdiet. Sed pharetra a nunc sit amet cursus. Aenean rutrum pharetra adipiscing. Donec id tempor justo. Vivamus non nibh sapien. Praesent fringilla augue sit amet ipsum ullamcorper, ut molestie mi accumsan. Etiam tincidunt rhoncus quam, vitae vehicula orci dignissim ut.

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Column Size –** determines the size of the column that should appear on the post or page.

b. **Last Column –** this checkbox when ticked will determine that the content added shall be the last column in a row.
c. **Content –** the contents that should be in every defined column.

XXIV. Youtube

This is used to render youtube videos to posts and pages via a shortcode. See sample below:

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Video URL –** enter the url of the youtube video in this field. You may copy the url on the address bar or you may use the share link just below the video.
b. **Autostart Video –** this checkbox when ticked shall render the video to start automatically when the post or page loads.
c. **Width –** determines how wide will the video be in pixels.
d. **Height –** determines how tall the video will be in pixels.

XXV. GMap

This generates a shortcode that displays google map in your post or page. Just like the following example:

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Map Latitude –** should be filled in with a numerical value that is the exact latitude of the location in the map.
b. **Map Longitude –** should be filled in with a numerical value that is the exact longitude of the location in the map.
c. **Width –** the width of the map in pixels
d. **Height –** the height of the map in pixels.

XXVI. Tweets

This generates a shortcode that displays a specific number of tweets in a post or page. See example below:

Tweet to @ManUtd

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Twitter Username –** should be filled in with the username of your twitter account.
b. **Number of Tweets to Show –** determines how many of your latest tweets to be displayed in the post or page.
c. **Tweets Style –** choose from 2 styles (light or dark) available you would like your tweets to be showed in.

XXVII. Slider

This generates a shortcode that displays a dynamic and beautiful slider in a post or page using the image gallery. See sample below:

In order to generate the shortcode for this content type, you need to supply the settings which are as follows:

a. **Source of Image** – this determines where the source of the images is accessible. It can either be image(s) of the current post or image(s) of a specific post.
b. **Post** – when you select under source of image post, this field will appear which prompts you to specify the post as the source of the image(s).
c. **Image Link** – when the image(s) are clicked by the user, this field defines where they will be redirected. It can either be image (default) where the link is the actual image url of a specific image or permalink which can be the post or page as the source of the image(s).
d. **Slider Size** – this defines how large will the slider be inside the post or page.

e. **Number of Slides** - defines how many slides or images are to be displayed in the slider.
f. **Animation speed (1000 = 1 second)** – determines how fast the animation is applied after every slider.
g. **Animation delay (1000 = 1 second)** – determines the interval the slider changes or shifts to another image.
